

Informative English translation of the Spanish policy dated 19 October 2026. This translation has not received separate institutional approval. Refer to the Spanish original in the event of a discrepancy. Translation prepared on 19 October 2026.

PERMANENT POLICY ON FREE ACCESS, OPEN ACCESS AND NONCOMMERCIAL DISSEMINATION

Supplementary record to the HTES Universal Declaration v0.3 and the HTES Statute on Governance and Compliance v0.1.

Promoter	Hopper Tech SpA, Chile
Date of directive	19 October 2026
Doctrinal approval	Hopper Tech Management: Declaration v0.3 and Statute v0.1
Purpose	To guarantee free access to the texts, adherence and participation in HTES mechanisms
Nature	Voluntary institutional commitment of the founding stage; neither a treaty nor a public legal rule

1. Nonprofit purpose of the principles

The foundational texts and HTES principles are offered to humanity for research, education, deliberation and shared evolution. They shall be disseminated free of charge, without compulsory payment, purchase, donation or subscription.

2. Institutional prohibition on fees

For this initiative, Hopper Tech SpA establishes that no fee shall be charged to read, download, copy for permitted uses, consult, express dissent, adhere, register as a participant, maintain membership or exercise participation rights in any HTES bodies that may eventually be constituted. This prohibition shall be incorporated as a protected constitutive clause in any successor entity. Paid membership categories and privileges in voting, representation or access arising from financial contributions shall not be permitted.

3. Donations and funding

Voluntary contributions, grants and transparent sponsorships may be accepted solely to sustain lawful activities compatible with HTES purposes. They shall not condition access, membership, voice, representation, adherence or participant status; nor shall they confer vetoes or privileges. Personal expenses or independent third-party services are not HTES fees.

4. License for dissemination of the documents

Only to the extent that it holds sufficient rights over protected elements of these documents' expression, Hopper Tech SpA authorizes their reproduction and adaptation for noncommercial purposes under Creative Commons Attribution-NonCommercial-ShareAlike 4.0 International (CC BY-NC-SA 4.0), with attribution and an equivalent license for derivative works. License text: <https://creativecommons.org/licenses/by-nc-sa/4.0/deed.es>. Third-party rights, statutory limitations and elements not subject to copyright are preserved.

5. Scope and limits of protection

The public license is irrevocable as regards permissions already granted to those who comply with its terms; it does not, by itself, prevent the rights holder from granting other licenses, third parties from independently developing unprotectable ideas, or fees being charged for independent services. The institutional no-fee policy is a separate commitment that shall be formalized in the bylaws or contracts of any future entity. No mechanism can absolutely guarantee the conduct of all people and organizations worldwide.

6. Future changes and safeguards

Hopper Tech Management has instructed that free access be maintained as a constitutive condition of the project. Any proposed institutional structure shall preserve this purpose; if a foundation or association is established, a reinforced clause and means of enforcement shall be examined with Chilean legal counsel. This record does not alter the already approved articles of Declaration v0.3 or Statute v0.1.

7. Decision record and publication

This record reflects the express instruction of Hopper Tech Management communicated on 19 October 2026. Its preparation does not replace formal corporate minutes, an authorized signature or professional review of rights ownership. The public availability of the documents shall subsequently be evidenced by a verifiable URL and publication date.

GUIDING PRINCIPLE

“Humanity made the development of artificial intelligence possible; artificial intelligence must contribute to humanity’s development. Neither must advance at the expense of the other: both must seek ways to evolve together.”
